

CITY OF KNOXVILLE

PUBLIC SERVICE DEPARTMENT SNOW PLAN

General Guidelines

The goal of Public Service is to clear or remove snow and ice from major and connector streets, exposing bare pavement and permitting the safe and orderly flow of traffic. This allows residents to travel to and from work and facilitates movement by emergency services such as Police, Fire and EMS. The priority of clearing major streets and connector streets assures traffic movement on the most heavily used streets.

Administrative Guidelines

Public Service (PSD) is the department assigned the responsibility for planning and administering the Snow and Ice Removal Plan for the City of Knoxville.

The operational components of the plan, personnel and equipment, are provided by PSD's Street Services and Construction units. A predetermined route is assigned to each unit with the Manager designating personnel and equipment to be used to accomplish the assigned task.

The PSD uses multiple weather forecasting tools, including the local Emergency Management Agency, the National Weather Service and local meteorologists for assistance in predicting snowfall and accumulations.

Personnel from the PSD monitor all snow operations from the command center located at 3131 Morris Avenue. Close radio contact is maintained with all operators to keep abreast of progress on the routes and to dispatch backup equipment when problems are encountered. A status board is maintained to monitor all field operations.

Operational Guidelines

If a snowstorm is imminent, the Director, Deputy Director and/or Operations Manager of Public Service will make the decision if/when to implement Stage I operations (applying salt brine). Stage I operations will begin 24-48 prior to the snowfall. All necessary personnel needed for brine operation will be contacted.

The decision to muster crews for the snow and ice removal operation (Stage II Operations) will be made by the Director or his/her designee based on weather conditions at the time of the storm and forecasts for the storm's duration. When this occurs, the Snow Coordinator will call all Managers of snow removal crews, the Warehouse Manager and the Fleet Services Shop Foremen. If the call comes after regular work hours, these Managers will contact personnel before leaving home.

The routes designated as Level I are to be handled before all other assignments. Only after equipment has been assigned to complete the Level I routes can any equipment be assigned to the Level II routes. Only after Level I and Level II streets are completed will trucks be assigned to trouble spots and Level III streets.

Upon receiving a firm prediction of two or more inches of snow, the Snow Coordinator will alert all Managers to mount plows. The decision to begin using the plows will be made based on the temperature, the rate of snow accumulation, street conditions and a discussion among Managers in the field.

To load salt, drivers will form a line to the salt bins by passing through the gate on the east side of the heavy equipment parking lot. This allows for one-way, westbound traffic from the salt bins to the calcium chloride wetting station and toward the exit gate.

Upon completion of each snow event, all equipment must be cleaned and serviced properly to avoid corrosion of equipment.

Goal

The goal of Public Service is to clear or remove snow and ice from streets to expose bare pavement and permit the safe and orderly flow of traffic. Pre-event planning and the implementation of a prioritized road clearing system are essential for the City's Snow and Ice Removal Plan.

Preparations

Spring	Assist Fleet Services Department with inspection, upgrade or repair of snow removal equipment
Summer	Inventory salt supply and if needed, renew salt contract for coming year
Sept/Oct	First meeting of administrative personnel and snow coordinators Preparation of equipment
December	In-house snow equipment and snow removal training by each manager

Priorities

Street prioritizations were based on traffic counts provided by the Department of Engineering and Metropolitan Planning Commission. Each street is designated Level I, II or III to indicate the priority of treating them with brine and/or salt and liquid calcium chloride.

Level I

Main streets carrying the highest volume of traffic and hospital routes

Level II

Streets connecting the main streets, feeder streets to connector streets, trouble spots and hills

Level III

Streets providing access to neighborhoods and main connections at the neighborhood level. Note: The decision to clear Level III routes is based on a number of factors including current weather conditions, salt/chemical reserves and forecast conditions.

How Streets Are Treated

During a snow or ice event the City of Knoxville has approximately 470 lane miles that are regularly cleared on a first and second priority basis by Public Service. One lane mile is defined as one truck treating one lane for one mile. The operational program is divided into stages based on snowfall accumulation.

Stage I Brine Pre-Treatment – With a prediction of ice/snow and depending on weather conditions, Public Service will begin brine production (rock salt and water) and all Level I streets are treated in advance of the storm. Distributing the brine solution uses 23 tons of salt to treat the Level I and II streets. The brining of Level III streets will be made at the discretion of the Public Service Director or his/her designee.

Stage II Salting of Snow Routes – Major snow removal operations involving the salting of designated snow routes due to a one-inch plus accumulation of snow. This stage will address Level I streets first, then Level II streets. Approximately 308 tons of salt are used to treat Level I and II streets.

The Gay Street Bridge

The Public Service Department will make every attempt to keep the Gay Street Bridge open and safe for traffic. In the past, the City has temporarily closed the Gay Street Bridge to avoid using salt that is corrosive to steel. To facilitate traffic flow, Public Service will use a special melting agent that is less corrosive to the bridge but still effective. The product recommended by TDOT is Potassium Acetate. If Potassium Acetate is not available, then brine and rock salt will be used to keep this key access route to downtown and South Knoxville open.

**LEVEL I STREETS
(Listed Alphabetically)**

Completed on Round 1

Street Name	Location - from and to	Organ
Boyd's Bridge	Biddle to City Limit	3172
Broadway (SR)	E Summit Hill to Foley	3174
Chapman Hwy (SR)	E Summit Hill to city limits	3124
